

QUICK INSTALLATION NOTES interactive text pieces

1. Install app
2. If you are using two monitors (Screens), set your computer screen to be screen 1 and positioned on LEFT and the external monitor/screen (or projector) to be screen 2 and on the RIGHT. (Display / Arrange in mac settings). THIS IS ESSENTIAL.
3. If you launch with two screen setup:
 1. one app window should launch on your computer (LEFT) screen, a controls window with faders and text etc.
 2. the second window will open FULL SCREEN on your second monitor. It will take over the screen. (For the piece 'Making Place' this will be black screen; for 'A walk I do' it will be a white screen)
 3. Start the app from the controls window (click on it, click play or demo)

If you are not sure if you have things working, try disconnecting your second screen and just launching the app with just one screen. It should launch both windows on the computer screen now – the 'performance' window will be a smaller window – just for demo/practice.

If still problems – do email: katharine@novamara.com
